

Red Lion Municipal Authority is going to have a contractor, Barrasso Excavating, replacing the water main on Springvale Road from South Main Street to the curve before Circle Drive and making a connection from a blow off on Wise Ave. to Springvale Rd.

This is a necessary upgrade to the water system. We propose to begin the project the week of March 29, 2021. The new water main material will be ductile iron pipe instead of the old galvanized piping. It will be 8" in diameter compared to the 2" main currently in place. Fire protection will be upgraded with the addition of 2 new fire hydrants. In addition, any house or building connection will be replaced with a new copper service line from the main to the curb line. This will be at the expense of the Red Lion Municipal Authority.

If you have any questions concerning the water system portion of this project or your house connection, please contact Jeff Beard or Keith Kahwajy at 244-3475.
